

SUMIT SAINI

Full Stack Developer | MERN Stack

sumitsaini1968@gmail.com | +91 8619110793 | LinkedIn: [Sumit-saini](#) | GitHub: [Sumitsaini55](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 1.5 years of hands-on MERN experience, currently building production features for an enterprise industrial plant management platform. Owned end-to-end delivery of a dynamic formula engine, bulk Excel data ingestion, reusable server-side filtering, and backend security hardening. Strong in REST API design, MongoDB query optimization, React component architecture, and shipping measurable performance improvements in a live production system.

EXPERIENCE

Full Stack Developer — Crion Tech

Feb 2026 – Present

On-site · Industrial plant management platform (React, Node.js, Express, MongoDB)

- **Architected a dynamic formula engine** (Generator, Editor, Saver and Runtime Implementation) that lets plant operators define custom calculations over live log data without code changes — adopted across 5+ modules and removing recurring developer change requests.
- **Automated asset onboarding** with a bulk XLSX/Excel import pipeline featuring streaming parse, schema validation and row-level error reporting, cutting a ~4-hour manual entry process to under 5 minutes for 5,000+ row uploads.
- **Reduced log and report API response time by ~60%** (~2.5s to under 1s) through MongoDB compound indexing, server-side pagination and projection-based queries on multi-row collections.
- Designed a **server-side filtering, search, sorting and pagination layer** on across 6+ modules.
- **Hardened backend security** by remediating vulnerabilities from an internal audit and implementing middleware-based rate limiting, request validation, centralised error handling and role-based authorization.
- Integrated **real-time PLC tag data** into MongoDB aggregation pipelines powering asset, quality and maintenance dashboards used daily by plant operations teams.
- Built React interfaces with Redux state management and reusable component patterns; improved render performance on large datasets via memoised lists and paginated data fetching.
- Collaborated with QA, Product and Design in 2-week sprints; reviewed pull requests and maintained Git branching standards and API documentation for owned modules.

Full Stack Developer Intern — Masai School

July 2025 – Oct 2025

- Built and deployed 4+ full stack MERN applications covering JWT authentication, role-based access, CRUD workflows, filtering and pagination.
- Developed responsive React UIs backed by Express REST APIs and MongoDB/Mongoose schema design with relational references.
- Practised Git-based team collaboration, peer code reviews and systematic debugging across time-boxed project sprints.

PROJECTS

Mega Mart — E-Commerce Web Application

React, Redux, Node.js, Express, MongoDB

Live: [mega-martshop.app](#) | Code: [github.com/sumitsaini55](#)

- Implemented JWT authentication with role-based customer and admin dashboards, protected routes and persisted session state.
- Built cart persistence, debounced product search and paginated catalog browsing over a 500+ SKU product collection.
- Deployed to production with environment-based configuration and separate API and client hosting.

Timeless Express — Packers & Movers Platform

React, Node.js, Express, MongoDB

Live: [timelessexpress.in](#) | Code: [github.com/sumitsaini55](#)

- Shipped a live client website with a quote-request workflow, server-side validation and email notification on submission.
- Designed a fully responsive mobile-first UI and deployed on a custom domain with SEO-friendly routing.

Mega Mart – E-Commerce Web App | Deployed Link :

HTML5, CSS3, JavaScript

<https://mega-martshop.app>

- Implemented a user-friendly and responsive interface for a seamless shopping experience across desktop and mobile devices.
- Integrated product listing, search/filter functionality, cart management, and order flow.

SKILLS

Languages: JavaScript, HTML5, CSS3 **Frontend:** React.js, Redux, Component Architecture, Reusable Components, Responsive Design, API Integration

Backend: Node.js, Express.js, REST APIs, JWT Authentication & Authorization, Middleware, Rate Limiting, Server-side Validation, Error Handling, File Upload / XLSX Processing

Database: MongoDB, Mongoose, Schema Design, Indexing, Aggregation Pipelines, Query Optimization

Tools & Practices: Git, GitHub, Postman, Code Reviews, Debugging, API Documentation

EDUCATION

Mohta PG College, Sadulpur — Bachelor of Computer Applications

July 2017 – May 2020

Mohta PG College, Sadulpur — M.Sc. Computer Science

July 2020 – June 2022

Masai School, Bengaluru — Full Stack Web Development

Oct 2024 – May 2025
